

## **Request for revision of deliverable submission for the project "POPREBEL (822682)".**

On date 14/04/2020, the officer "Jarkko SIREN" has requested the revision of the submission for the deliverable with title "Data management plan" and number "3" for the project "POPREBEL (822682)".

### *Request for revision comment:*

Opinion of the reviewers: The deliverable document should include several details that are not explicitly mentioned and may create problems in terms of data storage and security. In essence, the revision has to add several details for clarity:

1. It is quite clear where the data is stored but there are no details about how secure this primary unit of storage is / how security is ensured.
2. How does data sharing take place between partners?
3. Data from interviews and participant observation are stored on OneDrive. How are the safety and security of the cloud ensured? What happens if OneDrive shuts down unexpectedly?
4. What is the strategy for back-up copies in case something goes wrong with the files stored in the primary unit? Data management plans must include such provisions, which are mentioned neither in the deliverable nor in the technical report.
5. The project uses social media data. Is consent from users required for that type of data?
6. How does the consortium deal with various data management requirements across different countries? Has the project considered the legislation in all countries involved in the project and do the DMP provisions meet those requirements?
7. The deliverable refers to the publication on the website of data from WP6 in September 2019. Since this did not happen, any references to it must be deleted.
