# We create value

How about we stop using plastics in our nutritional needs?

## About our Project

In short i want to tell you that about (1 billion straw thrown every day in the world and around 1.5 million in Tunisia without control),

Our project is to make ecological straws based on food ingredients, biodegradable 90 times faster than plastic.

The new straws will be:

- 100% ecological
- Biodegradable
- Edible and healthy
- Rigid in the drink between 60 and 120 min (depending on the temperature)

Learn more about our project <https://edgeryders.eu/t/oci-lab-pailleco/12503>

We started with an idea, and now it is turning into a complete project  
It's a great thing to realize the evolution of your idea step by step

We've had multiple interactions into **Edgeryders** community with leaders and qualified mentors , and every time we move forward more

We fixed several aspects in our project through the feedback , and now we believe more in our idea , and we have a good will to continue progress and achieve our project

During this period and through the program we really moved on the team from an "idea" to the the stage of discovering the market and customers  
We formulated our project and through the assumptions we set several goals , Through our discussions via **Edgeryders** we became really aware about the importance of social responsibility and how an entrepreneur should solve the problems in his community.
