"Bringing ideas to life"

SPELLIT (LEXI)

SPELLIT is an educational game dedicated to helping dyslexic children.

Knowing that the most efficient way to teach a child is by interacting while playing, our game contains a box and a set of cards giving the child full control of the process. the child passes the card above a RFID reader, the speaker reads the content of the card and then asks the child to repeat it. The microphone will record what he said and the game will save it in its memory . Eventually, the parents will listen to the recordings and oversee the child's progress.

Our curriculum is based on specific exercises elaborated by specialists in this field.

Based on a precise commercialization Strategy, we will target the specialized dyslexia centers after they indicated their enormous interest in our project and the positive feedback which they conveyed to the parents.

How can we help children get through dyslexia ?

SPELLIT

when I first stepped into the Edgeryders community, my idea was blurry and the customer segment wasn't defined yet .
After every Lab meeting I felt that the project was becoming clearer than before.Each course that I attended took me one step closer to finalizing my project through the elaboration of my project's lean canvas and by the acquisition of essential tools .The offline tasks helped me develop my research skills and opened my eyes to a lot of opportunities related to my project.

Sahar Mahri Tunisia Tunsia @sahar_mahri_50
Ikdem Mbarek Tunisia Tunisia @ikdem_ben_mbarek_82

This engagement helped the project by clarifying the path I should follow and by facilitationg the elaboration of my work strategy.
